

Northstowe Learning Community

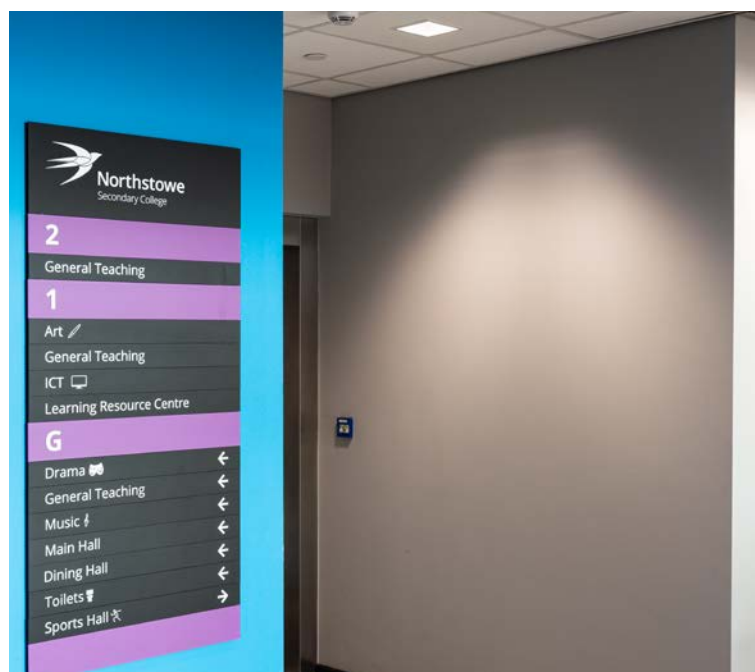

- Case Study

signs were specified by contractor Kier Construction to create a signage scheme at the Northstowe Learning Community in Cambridgeshire.

The project included internal and external signage at Northstowe School, in-keeping with the vibrant design scheme.

Internally, we have provided a scheme featuring 3mm frosted lucite. We have provided classroom signs with a range of iconography, our patented jigsaw sign product, a suite of cut letters and a vinyl graphic in the reception area displaying the college logo.

Externally, we manufactured a bespoke fabricated aluminium totem sign, bespoke post and panel signs and several 2mm flat cut, brushed stainless steel external logo signs.

Along the hallways and corridors, we provided a mix of classroom door signs. In the main reception area, we have provided our patented jigsaw directory sign, cut letters to denote the reception area and a printed gvinyl graphic.

The school colour scheme uses a palette of bright colours to denote the different houses. Our 3mm frosted lucite cut letters with high polish edge provide a stark contrast an easy navigation.

The bespoke aluminium fabricated totems signs with recess edges feature in the courtyard. The totem is fitted to a foundation cage for secure fixing and the panels are textured with self-adhesive vinyl with tamper resistance.
