

# Repton Sports Centre

## - Case Study

xsign worked directly with Repton Sports Centre in Derbyshire on a new suite of internal and external signs.

The external signage scheme includes a stainless steel building mounted logo sign, an external bespoke illuminated fabricated totem sign and built-up stainless steel lettering depicting the branding of the site.

Internally, we have provided a range of wayfinding signs using our patented jigsaw signage system and our puzzle door signs that can handle paper inserts. We've also provided a suite of 4mm lucite signs with a foil finish and direct digital print at ultra-high resolution 1800dpi.

The scheme was supplied and installed by our team of experienced fitters.

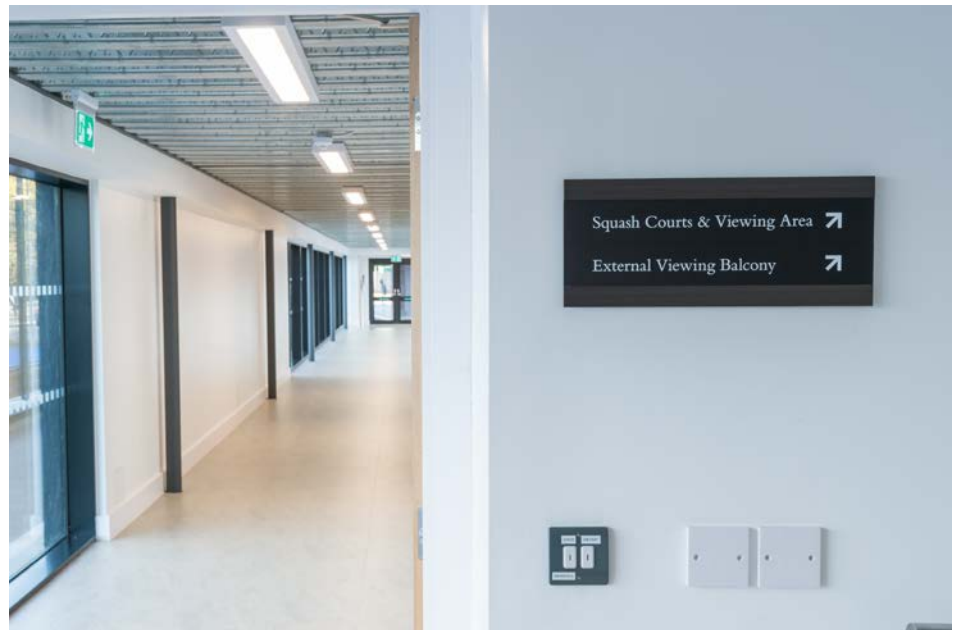

The building mounted logo sign to the front of the sports centre features 3mm brushed stainless steel lettering. The school crest features a glass bead blasted edge finish, with 240 grit polish.

The whole sign is flush mounted to the building substrate.

The internal wayfinding scheme uses our patented jigsaw scheme, which makes it easy for the signage to be changed over time.

The 4mm foil lucite signs use a blackened steel high quality finish and direct digital print which offers tamper resistance.

On the doors of changing facilities we have used our patented puzzle signage system. Puzzle allows for easy change of paper insert signs.

The foil lucite surrounds in blackened steel provide a high quality finish.
