

Nottingham College

- Case Study

xsign were appointed by contractor, Wates, to provide a signage scheme at Nottingham City College, an educational institute in the heart of Nottingham City Centre.

Internally, the scheme features the college logo in 4mm thick frosted lucite, reverse coated with a high grade colour finish and a welcome sign with 20mm built up fabricated aluminium lettering, both on entrance to the college. We've also provided a suite of 4mm frosted lucite directory signs with direct digital print, fitted to our patented jigsaw product to provide wayfinding in the corridors. Additionally we feature suspended wayfinding signs, wall directory signs, floor level indicators, facilities ID signage and feature graphics.

Externally, we have provided a fabricated aluminium totem with digitally printed vinyl graphics fixed, wall mounted display frames and delivery/service signage in the car parks.

The corridors feature directory wayfinding signs using 4mm frosted lucite with high legibility direct digital print. The signs are mounted to the wall with our patented jigsaw system, allowing for easy change of panels.

We've used digitally printed, profile cut, high tack vinyl lettering directly applied to the wall to display an inspirational quote.

We've created 3mm frosted acrylic pictograms with a high polished edge and fixed to the walls to provide wayfinding for the facilities.

Along the corridors we've provided suspended signs to aid wayfinding and navigation using 4mm thick frosted lucite, mounted to the ceilings using hidden fixings.

We feature 3mm frosted lucite facilities ID signs along the corridors, with high legibility direct digital print.

In the car park and service areas, we've manufactured 3mm thick aluminium signs with ground and smooth finished edge and high grade paint finish.
