

Crocus Medical Practice

- Case Study

xsign provided an internal and external signage package at Crocus Medical Practice in Saffron Walden, Suffolk.

The internal signage package comprises cut letters, our patented Jigsaw system and a range of iconography and wayfinding features.

The external signage includes built up letters on entrance to the building, utilising automotive grade paint to ensure a long-lasting finish.

The work at Crocus demonstrates our continued capability at medical facilities and hospitals.

Cut letters provide a solution to key wayfinding points in the medical facility.

Coloured panels with direct digital print feature throughout the building to provide wayfinding to the different rooms.

The exterior signage features bespoke letters fixed to the exterior of the building, using the font type for the practice.

We've used signage panels with high resolution direct digital print throughout the building to provide wayfinding.

Using direct digital print with 1800dpi high resolution, we're able to achieve superior text legibility and a high quality finish.

Alongside our signage manufacture, we've also installed all of the signage throughout the practice, providing a complete service for the client.
